## TRANSMISSION OIL SEMI-SYNTHETIC

- |  |                                       |   |  |   |                                    |
|--|---------------------------------------|---|--|---|------------------------------------|
|  | QUICK START IN ALL WEATHER CONDITIONS |  | HIGH THERMAL RESISTANCE                  |  | RESISTANCE TO OXIDATION            |
|  | HIGH PERFORMANCE PROPERTIES           |  | PROTECTION OF SURFACES AGAINST CORROSION |  | RELIABLE PROTECTION AGAINST DAMAGE |

All-season semi-synthetic premium-class transmission oil, intended for use in light vehicles, trucks, buses, and agricultural and special machinery, which require the use of GL-4 oils that work in extremely harsh environments and with long oil change periods. It has been developed to be used in manual transmission gearboxes and in mechanisms with spiral bevel gears. It offers a wide variety of applications and the long-term, trouble-free service life of the transmission. The unique composition of this oil protects the gears and bearings against wear and tear in various operating modes.

### ADVANTAGES

- due to synthetic base, perfect lubrication capacity is ensured and it eliminates possibility of friction, burrs, pitting (deep metal corrosion) and other damages;
- has exclusive cold characteristics, and it ensures transmission parts' operation up to -40°C;
- unique composition of the base oil and effective additives package ensures protection of gear trains and bearings from wear in various operational modes;
- excellent thermal oxidation stability;
- very good endurance against high temperatures maintains perfect cleanliness of transmission parts, and it extends service life of oil and gear box;
- effective operating temperatures' reduction increases service life of oil and parts of an assembly, helps to save fuel and to decrease deposits' formation;
- its operational characteristics exceed requirements of most of similar products from Russian and international manufacturers.

### RECOMMENDED FOR

- Operation in various climate conditions.
- Manual transmission gearboxes and distribution gearboxes in 4-wheeldrive cars with cylindrical, bevel and spiral-bevel gears.
- Use in hypoid gears at significant speeds, but with low or medium torque.
